A GUIDE TO CLOSE-UP READING

Do you have presbyopia?

1. **Print this test** at 100% scale, without "fit to page".
2. Hold the sheet **about 35 cm** from your eyes: roughly the length of your forearm.
3. Read the lines **without glasses**, starting from the top. Find the **first line you struggle to read**: the number on the left is your suggested strength.

Reading chart

35 cm distance · good light · no glasses

+3.00	Presbyopia is a vision disorder
+2.50	Characterised by the progressive loss
+2.00	Of the ability to focus on close objects
+1.50	It is a condition linked to growing older over the years
+1.00	CliC reading glasses are always close at hand, wherever you go

Indicative values, not a prescription. This test does not replace an eye exam. If you have not had your eyes checked for a while, see better with one eye, already wear glasses for distance or notice a sudden change in your vision, see an optician or eye doctor.
